Team C. Iteration 3 Feedback

Total mark: 71

Requirements: 18 / 20

Good.

Hard to find. Rename file iter-0-csstcs4770tpapt2016wsamunWinter2016.

Some information is in two documents: COMP4770-TeamC-DesignDocument-Iteration1 and also csstcs4770tpapt2016wsamunWinter2016. This is confusing. Please clean up and ensure that it is up to date.

I suggest two documents (each with a table of contents).

- Requirements
- High-level-design

The test plan also appears in two documents.

High-level design: 18 / 30

Although there is a folder named "high level design". I did not find anything aside from the data base design (in csstcs4770tpapt2016wsamunWinter2016) and the web api (in app/api.html).

Web API does not seem to have been kept up to date. It seems incomplete and unfinished.

There is no break down into components or discussion of the interfaces between these components.

Implementation: 14 / 20

Good start, but there is much left to be done.

Feature Completeness: 13 / 20

Many features remain.

Presentation: 8 / 10

Other comments

Keep logs up to date.

Clean up unneeded files. E.g. the src directory.

Comments from Zizui

Group C:

1. Server failed when logging in

```
ubuntu@test:~/teamc/server$ node server.js

```

1. 'Course' page is empty
2. 'Sign in' page has some visual bugs: register and submit buttons are not at the same size
3. I cannot test functionality because I cannot log in system.
